Proposal for the classification of 10 substances as narcotic drugs

Based on the attached classification documents, the Public Health Agency of Sweden proposes that the substances clobromazolam, muscimol, 7-hydroxymitragynine (7-OH-mitragynine), mitragynine pseudoindoxyl, methiodone, 1S-LSD, 1T-LSD, ADB-5'Br-PINACA (ADMB-5'Br-PINACA), MDMB-BUTINACA (MDMB-BINACA) and MDMB-5'Br-4en-PINACA be classified as narcotic drugs under the Act (1992:860) on the Control of Narcotic Drugs and the Narcotic Drugs Penal Code (1968:64) and be included in the Ordinance (1992:1554) on the Control of Narcotic Drugs.

It is proposed that clobromazolam and muscimol should belong to the hypnotics and tranquillisers group. It is proposed that 7-hydroxymitragynine (7-OH-mitragynine), mitragynine pseudoindoxyl and methiodone should belong to the analgesics group. It is proposed that 1S-LSD, 1T-LSD, ADB-5'Br-PINACA (ADMB-5'Br-PINACA), MDMB-BINACA (MDMB-BUTINACA) and MDMB-5'Br-4en-PINACA should belong to the hallucinogens group.

For all the substances, there is scientific documentation supporting the narcotic drugs criteria.

The majority of these substances have been seized and identified in Sweden. Several of the substances are being or have been sold through online outlets and physical stores and have been discussed on drug forums on the internet.

Risks to human life and health and public safety mean that the regulatory amendments should be prepared in a very short amount of time and the Public Health Agency of Sweden recommends invoking urgent reasons under Directive (EU) 2015/1535 of the European Parliament and of the Council.

Decisions in this matter were made by Deputy Director-General Anna Bessö. The final processing of the case was attended by the Head of Department Josefin P. Jonsson, the Head of Unit Adli Assali, and the Head of Legal Department Bitte Dellborg. The investigator Gitte Terp has acted as rapporteur.

In accordance with the decision of the Public Health Agency of Sweden
