Chapter Item (To be completed in the 'Official Gazette')	

1. ------IND- 2019 0034 E-- EN- ------ 20200824 --- --- FINAL

ROYAL DECREE APPROVING THE NATIONAL TECHNICAL PLAN FOR DIGITAL TERRESTRIAL TELEVISION AND REGULATING CERTAIN ASPECTS FOR THE RELEASE OF THE SECOND DIGITAL DIVIDEND

Article 61 of General Telecommunications Act 9/2014 of 9 May 2014 establishes that it is the role of the Government to approve the national technical plans for radio and television broadcasting, given that the planning, management and monitoring of the radio public domain falls under the exclusive competence of the State as recognised in Article 149(1)(21) of the Spanish Constitution.

Royal Decree 805/2014 of 19 September 2014 adopted the National technical plan for digital terrestrial television and governed certain aspects for the release of the digital dividend. Said Royal Decree established the actions to be taken to release the band for the first digital dividend (790-862 MHz), used for the provision of digital terrestrial television services, in order to reserve it for the provision of broadband mobile communications services. The process of releasing this band was completed on 31 March 2015. In accordance with the provisions of said plan, digital terrestrial television services are provided in the 470 to 790 MHz frequency band (radio channels 21 to 60).

At an international level, the World Radiocommunication Conference 2012 (WRC-12), organised by the International Telecommunication Union (ITU) and held in Geneva from 23 January to 17 February 2012, approved the allocation of the 694-790 MHz frequency band (700 MHz band) in Region 1 to mobile services for use on a co-primary basis with broadcasting services (DTT). It also agreed for this allocation to enter into force immediately after the World Radiocommunication Conference 2015 (WRC-15). In the period between the two conferences, studies were carried out to define the technical conditions and the conditions for compatibility with other services. The WRC-15, held in Geneva from 2 to 27 November 2015, confirmed the allocation of the 694-790 MHz frequency band (700 MHz band) to mobile services in ITU Region 1, which includes Spain.

Under these international regulatory decisions, the European institutions determined that this frequency band corresponding to the so-called second digital dividend would be used for purposes other than broadcasting services, principally those relating to advanced pan-European communications services, with the aim not only of favouring a more efficient use of the spectrum, but also of ensuring the use of the second digital dividend band to introduce and drive fifth generation (5G) mobile services in Europe. It should also be noted that the impact of this new technological paradigm will not be limited to the electronic communications sector, but will facilitate the introduction of innovative applications for businesses, individuals and government bodies. In short, 5G technology is set to become a cornerstone in the digital transformation of society and the economy.

On 25 May 2017, the Official Journal of the European Union published Decision (EU) 2017/899 of the European Parliament and of the Council of 17 May 2017 on the use of the 470-790 MHz frequency band in the Union, the aim of which is to guarantee a coordinated approach to the use of this band in the European Union in accordance with common objectives.

Article 1 of said Decision establishes that, by 30 June 2020, Member States shall allow the use of the 694-790 MHz ('700 MHz') frequency band for terrestrial systems capable of providing wireless broadband electronic communications services only under harmonised technical conditions established by the European Commission pursuant to Article 4 of Decision No 676/2002/EC of the European Parliament and of the Council of 7 March 2002 on a regulatory framework for radio spectrum policy in the European Community.

For this purpose, in 2016 the European Commission published Implementing Decision (EU) 2016/687 of 28 April 2016 on the harmonisation of the 694-790 MHz frequency band for terrestrial systems capable of providing wireless broadband electronic communications services and for flexible national use in the Union.

On a national level, the Ministry of the Economy and Enterprise published the "*Roadmap for the process of authorising the 700 MHz frequency band for the provision of wireless broadband electronic communications services*" on 29 June 2018, which took into consideration the contributions received through the public consultation process on said matter. One of the actions planned in this roadmap, to be performed in order to release the 694-790 MHz band from its current uses by digital terrestrial television (DTT) services, so that it can be used for terrestrial systems capable of providing wireless broadband electronic communications services, is the approval of a new national technical plan for digital terrestrial television (Technical DTT Plan) as well as adoption of the necessary regulatory measures for the release of the second digital dividend.

Each of the actions to be performed, as provided for in this Royal Decree, is designed to minimise the impact of the release process of the second digital dividend on citizens and audiovisual communications service providers.

Digital terrestrial television services will be broadcast in the 470 to 694 MHz frequency band (radio channels 21 to 48) and, in accordance with the objective indicated above, this standard establishes

that each frequency band will have the same digital terrestrial television networks (digital multiplexes) and regional variations that existed in the technical plan prior to the one adopted by this Royal Decree. For this reason, a frequency plan making more efficient use of the spectrum was required, alongside intensive international coordination work, bearing in mind that 30 per cent of frequencies that are currently being used to broadcast DTT services need to be released. The new technical plan also establishes that the current offer of digital terrestrial television channels will be retained.

This measure guarantees the continuity of all current licences for audiovisual communication services broadcast over the terrestrial airwaves and all regional public television variations, as well as facilitating the simultaneous broadcast of each of the digital multiplexes in geographical areas in which the transmission frequency must be changed as a result of the process of releasing the second digital dividend.

The frequency plan included in the technical plan approved by this Royal Decree has, as far as possible, maintained the frequencies within the 470-694 MHz band that were already being used by each of the digital multiplexes in each of the geographical areas, in order to reduce as much as possible the planning of new frequencies, the need for simultaneous broadcast and the need to adapt users' television receivers.

In accordance with the above, this standard establishes that state-wide and autonomous community-level digital terrestrial television services are to be provided through eight digital multiplexes, the radio frequency plan for which is included in the technical plan approved by this Royal Decree.

The eight digital multiplexes (RGE1, RGE2, MPE1, MPE2, MPE3, MPE4, MPE5 and MAUT) established in the technical plan approved by this Royal Decree are based on the corresponding digital multiplexes that were already in service, with changes to the radio frequencies within the 694-790 MHz band that is to be released, and on the adjustments needed in order to establish a frequency plan for these eight digital multiplexes within the 470-694 MHz band, which will continue to be used for the provision of digital terrestrial television services, and with the changes arising from the international frequency coordination agreements reached with Spain's neighbouring countries.

In the case of the Corporación Radio y Televisión Española SA SME, the capacity of the RGE1 digital multiplex and three quarters of the RGE2 digital multiplex is reserved for national public service broadcasting. Likewise, the autonomous community-level MAUT digital multiplex is reserved for each of the autonomous communities within their own territory.

State-wide digital terrestrial television broadcast licence-holders will use the transmission capacity of the state-wide broadcasting digital multiplexes required to operate the television channels to which their licences entitle them; specifically, they will access the transmission capacity of the MPE1, MPE2, MPE3, MPE4 and MPE5 digital multiplexes and one quarter of the RGE2 digital multiplex.

Moreover, the Royal Decree establishes the basic conditions under which the process of reordering the spectrum and releasing the radio channels that are to be vacated will take place, with the aim of ensuring the availability of the 694-790 MHz frequency sub-band so that it can be used for the provision of electronic communications services in accordance with the provisions of the European legislation.

The plan lists the radio channels on which the eight state-wide or autonomous community-level digital multiplexes will be operated, in each of the geographical areas stipulated in the plan.

Said radio frequency plan includes, in particular, the planned radio channel changes in each of the eight digital multiplexes (RGE1, RGE2, MPE1, MPE2, MPE3, MPE4, MPE5 and MAUT) in order to efficiently deal with the process of releasing the affected channels for the digital dividend, and with the aim of optimising the use of the spectrum.

During this process, digital terrestrial television service providers may deem it necessary in some cases, in order to facilitate the installation of aerials at citizens' premises, to maintain the simultaneous broadcasting of programming on the radio channels that are to be vacated and on the new channels that the technical plan allocates to them. For this purpose, the plan establishes the procedure for undertaking the necessary channel changes and the conditions for the continuity and subsequent cessation of broadcasts on the channels that are to be vacated.

The sixth additional provision establishes the conditions in which government bodies and government-run organisations will be able to undertake initiatives to broadcast digital television services to citizens in areas where there is no digital terrestrial television service, in compliance with the principle of technological neutrality and with state aid rules. Such initiatives will respond to the existence of a market failure situation as referred to in Article 9(2) of Act 9/2014 of 9 May 2014.

Moreover, the plan includes measures to boost technological innovation in audiovisual services, in particular the introduction of high-definition (HD) and ultra-high definition (UHD) television.

For this reason, it provides for the upgrade of all standard-definition channels to high definition, and enables digital terrestrial television service providers, within their reserved capacity, to make certain broadcasts in ultra-high definition. Similarly, it establishes measures to promote the future upgrade of broadcast equipment to higher spectral efficiency technologies, such as advanced video formats (for example, HEVC) and signal transmission technologies (for example, DVB- T2), as well as those to facilitate the upgrade of the pool of digital terrestrial television receivers in order to receive these broadcasts. For the same purpose, it provides for the State Secretary for the Information Society and the Digital Agenda to be able to authorise experimental technical broadcasts that make use of advanced standards of digital terrestrial television with higher spectral efficiency technologies, subject to the availability of frequencies and to the limitations arising from international frequency coordination agreements.

The second final provision amends the frequency bands intended for operation of digital terrestrial audio broadcasts. This eliminates the 1452 to 1467.5 MHz and 1467.5 to 1492 MHz bands, as these

have been harmonised for the provision of terrestrial systems capable of providing electronic communications services in the European Union, through Commission Implementing Decision (EU) 2018/661 of 26 April 2018 amending Implementing Decision (EU) 2015/750 on the harmonisation of the 1452-1492 MHz frequency band for terrestrial systems capable of providing electronic communications services in the Union.

The third final provision indicates the local digital television channels that will be affected by the spectrum reordering required to release the digital dividend, and the planned new replacement channels.

Equally, the fourth final provision establishes specific measures regarding common telecommunications infrastructure in the interior of buildings in order to clarify the legal regime and facilitate the possible incorporation or adaptation of said infrastructure to the changes involved in releasing the digital dividend.

It also includes the fifth final provision modifying the first addition provision of the Regulation on the use of the radio public domain, approved by Royal Decree 123/2017 of 24 February 2017. Through this provision, the frequency bands with a limit on the number of licences to be granted for use in the radio public domain include the 694 MHz to 790 MHz band, the 1427 to 1517 MHz band and the 24.25 to 27.5 GHz band, these bands having been identified as priorities for the launch of 5G technology in the European Union, and it having been confirmed that there is great demand for accessing the use of these bands.

Consequently, this Royal Decree is intended to adopt the new national technical plan for digital terrestrial television and establish the scenario for the reordering of the spectrum and the process of releasing the second digital dividend.

This standard was drafted and processed according to the principles for sound regulation set out in Article 129 of Law 39/2015 of 1 October 2015 on Common Administrative Procedures in Public Administration. In particular, with regard to the principle of necessity, the release of the 694-790 MHz frequency band (second digital dividend), intended for use in the provision of electronic communication services, entails the need to adopt a new national technical plan for digital terrestrial television. As for the principle of proportionality, the release process for the 694-790 MHz frequency band and the corresponding radio channel changes to be applied are strictly necessary and have a minimal impact on individuals and television services providers. This Royal Decree guarantees legal certainty, given that it is in line with European regulations which require authorisation, by no later than 30 June 2020, for the use of the 694-790 MHz frequency band (700 MHz band) for terrestrial systems capable of providing electronic communication services while also retaining the digital terrestrial television channels that are currently available. As for the principle of transparency, the text expressly states the reasons for this standard and the new plan that it adopts, after completion of the public consultation and the public information and hearing process provided for in Article 133 of Law 39/2015 of 1 October 2015 on Common Administrative Procedures in Public Administration. Finally, this Royal Decree meets the principle of effectiveness, given that it does add any administrative burden, and even also some of it.

This instrument has undergone the procedure provided for in Directive (EU) 2015/1535 of the European Parliament and of the Council of 9 September 2015 laying down a procedure for the provision of information in the field of technical regulations and of rules on Information Society services, and Royal Decree 1337/1999 of 31 July 1999 regulating reporting in the area of technical rules and regulations and regulations related to Information Society services.

This Royal Decree has been drafted in accordance with the provisions of Article 133 of Law 39/2015 of 1 October 2015 on common administrative procedures in public administration, and the draft has been informed by the National Commission on Markets and Competition, pursuant to the provisions of Article 5(2)(a) of Law 3/2013 of 4 June 2013 establishing the National Commission on Markets and Competition.

This Royal Decree is issued by virtue of the exclusive competence of the State regarding telecommunications as recognised in Article 149(1)(21) of the Spanish Constitution.

By virtue whereof, at the proposal of the Minister for the Economy and Enterprise, in accordance with the Council of State and by resolution of the Council of Ministers at its meeting held on

I HEREBY DECREE THE FOLLOWING:

Article 1. *Approval of the national technical plan for digital terrestrial television.*

The national technical plan for digital terrestrial television outlined below in the Royal Decree is approved (Technical DTT Plan).

Article 2. *Operation of the state-wide and autonomous community-level digital terrestrial television multiplexes.*

1. State-wide digital terrestrial television services will be provided through the capacity of seven digital multiplexes specified in the national technical plan for digital terrestrial television which is approved by this Royal Decree, named RGE1, RGE2, MPE1, MPE2, MPE3, MPE4 and MPE5.

2. The Corporación de Radio y Televisión Española will operate the RGE1 state-wide multiplex and three quarters of the capacity of the RGE2 state-wide multiplex for the provision of public service television broadcasting.

The Corporación de Radio y Televisión Española will be responsible for the technical management of the RGE2 state-wide multiplex.

3. Current state-wide digital terrestrial television service licence-holders will operate the television channels to which they are entitled by their licences through one quarter of the capacity of the RGE2 digital multiplex, and the capacity of the MPE1, MPE2, MPE3, MPE4 and MPE5 digital multiplexes.

4. The MAUT autonomous community-level multiplex specified in the national technical plan for digital terrestrial television approved by this Royal Decree is reserved for each of the autonomous communities within its territory.

In those autonomous communities where there is an autonomous community-level public television service, the technical management of the MAUT multiplex will be the responsibility of the provider, body or entity that must comply with the coverage obligations as stipulated in Article 6(2).

Article 3. *Use of radio channels in digital multiplexes.*

1. The RGE1, RGE2, MPE1, MPE2, MPE3, MPE4, MPE5 and MAUT digital multiplexes will be operated on the radio channels that each of them and each geographical area is assigned in the national technical plan for digital terrestrial television approved by this Royal Decree.

2. Notwithstanding the above, by resolution of the responsible person at the State Secretariat for the Information Society and the Digital Agenda, the radio channels that make up each of the aforementioned digital multiplexes which were previously used by other digital multiplexes or whose use will be incompatible with radio channels operating on other digital multiplexes, will be identified, and the date on which the digital terrestrial television service providers can access them once their previous use has come to an end will be established in accordance with the third transitional provision.

Article 4. *Regulation of the process of releasing the 694 MHz to 790 MHz frequency band for the Corporación de Radio y Televisión Española.*

1. The Corporación de Radio y Televisión Española will operate the capacity of the RGE2 state-wide digital multiplex and three quarters of the capacity of the RGE2 state-wide digital multiplex for the provision of public service television broadcasting.

2. For the purposes of releasing the 694 MHz to 790 MHz frequency band, within twelve months from the entry into force of this Royal Decree, the Corporación de Radio y Televisión Española will be required to facilitate, in the RGE2 digital multiplex, the broadcast of the channel of Ten Media S.L., which is currently broadcast on said multiplex.

3. The Corporación de Radio y Televisión Española must, prior to 1 June 2020, achieve a coverage of at least 98% of the population with the RGE1 digital multiplex and 96% of the population with the RGE2 digital multiplex.

Article 5. *Regulation of the process of releasing the 694 MHz to 790 MHz frequency band for state-wide digital terrestrial television service licence-holders.*

1. The current state-wide television service licence-holders will operate the television channels to which their licenses entitle them through the following transmission capacities of the RGE2, MPE1, MPE2, MPE3, MPE4 and MPE5 digital multiplexes:

a) Radio Blanca, S.A: will operate one quarter of the capacity of state-wide multiplex RGE2.

b) Sociedad Gestora de Televisión Net TV, S.A: will operate half of the capacity of state-wide multiplex MPE1.

c) Veo TV, S.A: will operate half of the capacity of state-wide multiplex MPE1.

d) Atresmedia Corporación de Medios de Comunicación, S.A, in relation to the licence that was held by Antena 3 de Televisión, S.A: will operate half of the capacity of the MPE2 state-wide multiplex and one quarter of the MPE4 state-wide multiplex; in relation to the licence that was held by Gestora de Inversiones Audiovisuales La Sexta, S.A: will operate half of the capacity of the MPE2 state-wide multiplex; and in relation to the licence obtained during the public tender called by the Resolution of the Council of Ministers of 17 April 2015: will operate one quarter of the MPE5 state-wide multiplex.

e) Mediaset España Comunicación, S.A., in relation to the licence that was held by Gestevisión Telecinco S.A: will operate half of the capacity of the MPE3 state-wide multiplex and one quarter of the MPE4 state-wide multiplex; in relation to the licence that was held by Sociedad General de Televisión Cuatro, S.A.U: will operate half of the capacity of the MPE3 state-wide multiplex and one quarter of the MPE4 state-wide multiplex; and in relation to the licence obtained during the public tender called by Resolution of the Council of Ministers of 17 April 2015: will operate one quarter of the MPE5 state-wide multiplex.

f) Trece TV, S.A: will operate one quarter of the capacity of state-wide multiplex MPE4.

g) Real Madrid Club de Fútbol: will operate one quarter of the capacity of state-wide multiplex MPE5.

h) Ten Media S.L.: will operate one quarter of the capacity of state-wide multiplex MPE5.

In order to safeguard the general interest objective of driving the introduction of high-definition television and maintaining the content currently available in high definition, and in accordance with the terms of the fifth transitional provision, said service providers, within the scope of their licences, and within the transmission capacity mentioned in the subparagraphs above, will be able to operate full and simultaneous high-definition broadcasts of their standard-definition digital television channels.

2. The current state-wide digital terrestrial television licence-holders must, prior to 1 June 2020, achieve a coverage of at least 96% of the population on the RGE2, MPE1, MPE2, MPE3, MPE4

and MPE5 digital multiplexes that they will operate in accordance with the provisions of Section 1 of this article.

Article 6. *Regulation of the process of releasing the 694 MHz to 790 MHz frequency band for autonomous community-level digital terrestrial television services.*

1. The competent bodies in each Autonomous Community will be able to determine which digital channels on the MAUT digital multiplex, specified in the national technical plan for digital terrestrial television approved by this Royal Decree, will be operated by the autonomous community-level public television service and which will be operated by private licensed companies.

2. In the case of direct management of the autonomous community-level public television service, the public service providers must achieve coverage of at least 98 per cent of the population in their Autonomous Community for the MAUT digital multiplex prior to 1 June 2020. For other management approaches, this obligation shall fall to the bodies or entities specified by the competent bodies in each Autonomous Community.

Article 7. *Number of television channels in each digital multiplex and high-definition broadcasting*

1. Each digital multiplex, no matter its coverage, has the capacity to integrate four high-definition television channels.

2. All television channels, no matter their coverage, must upgrade their broadcasting to high-definition before 1 January 2023.

3. The responsible person at the Ministry of the Economy and Enterprise can issue an order to amend the number of television channels within each multiplex according to improvements in compression and coding techniques, the available bit rate capacity or future technological developments. In accordance with the provisions of Article 24(2) of Law 7/2010 of 31 March 2010 on audiovisual communication, the adoption of this measure and the technological improvements that allow greater use of the public domain for audiovisual communications will not entitle licence-holders to exceed the conditions established in their licences or, in particular, to make use of a greater number of pay-to-view or freeview channels than they were authorised to broadcast.

4. The remaining digital multiplex transmission capacity will be able to be used, as a means of driving the Information Society and fostering innovation in information and communication technologies, so state-wide digital terrestrial television broadcast licence holders can provide related or interactive services that are distinct from those of television broadcasting, such as electronic programme guides, teletext, the transmission of data files and applications, and equipment software updates, among others.

In the event that this remaining digital multiplex capacity is used to provide related or interactive services that are distinct from those of television broadcasting, said services must occupy no more

than 20% of the total broadcast capacity of said digital multiplex, a percentage that can be modified by order of the responsible person at the Ministry of the Economy and Enterprise depending on the development of said related and interacted services. These related or interactive services will not be able to use the identification parameters of the digital terrestrial television service.

Article 8. *Characteristics of digital terrestrial television receivers.*

1. Digital terrestrial television receivers must have open, compatible interfaces that allow interoperability.

2. Manufacturers of digital terrestrial television receivers must indicate and inform users clearly and in detail of the capacities of each receiver offered for sale, including, in particular, the specifications relating to receiving digital terrestrial television, high-definition, ultra-high definition, DVB-T2, and other additional functions.

Article 9. *Technical specifications for high-definition digital terrestrial television broadcasts.*

1. High-definition digital terrestrial television broadcasts must comply with the following requirements:

a) The vertical resolution of the component video will be equal to or greater than 720 active lines with an aspect ratio of 16:9.

b) The video coding system will comply with the international telecommunications standard of Recommendation ITU-T H.264: 'Advanced video coding for generic audiovisual services' equivalent to standard ISO/IEC 14496-10, commonly referenced as H.264/MPEG-4 AVC.

c) The audio signal may be stereo or multichannel 5.1. The audio coding system shall meet international standard ITU-R BS.1196-7, and Sections 6.1 to 6.5 'Audio' of European standard ETSI TS 101 154.

d) Depending on technological developments, the Ministry of the Economy and Enterprise may decide to use other video and audio coding systems provided they are at least as efficient as those indicated in subparagraphs b and c above.

2. Broadcasts that, during the production, editing, transmission or broadcasting process, have undergone any type of conversion to a format with characteristics that are different to those indicated in the previous paragraph will not be considered to be high-definition digital terrestrial television broadcasts.

Article 10. *Technical specifications for ultra-high definition digital terrestrial television broadcasts*

1. Ultra-high definition digital terrestrial television broadcasts must comply with the following requirements:

a) The vertical resolution will be equal to or greater than 2160 active lines with an aspect ratio of 16:9.

b) The video coding system will comply with the international telecommunications standard of Recommendation ITU-T H.265: 'High efficiency video coding' commonly referenced as H.265/HEVC.

c) The audio signal may be stereo or multichannel 5.1. The audio coding system shall meet international standard ITU-R BS.1196-7, and Section 6 'Audio' of European standard ETSI TS 101 154.

d) Depending on technological developments, the Ministry of the Economy and Enterprise may decide to use other video and audio coding systems provided they are at least as efficient as those indicated in subparagraphs b and c above.

2. Broadcasts that, during the production, editing, transmission or broadcasting process, have undergone any type of conversion to a format with characteristics that are different to those indicated in the previous paragraph will not be considered to be ultra-high definition digital terrestrial television broadcasts.

First additional provision. *Definitions.*

For the purposes of this Royal Decree and the national technical plan for digital terrestrial television that it adopts, the terms defined in Annex IV to the Technical DTT Plan shall have the meanings indicated there.

Second additional provision. *Technical management of the digital multiplex.*

1. The bodies that operate television channels within the same digital multiplex must work together to best manage all aspects affecting the multiplex in its entirety or establish rules for this purpose.

Notwithstanding the above, the Corporación de Radio y Televisión Española, which is responsible for the technical management of the RGE2 digital multiplex, and autonomous community-level public television service providers, who are responsible for the technical management of the MAUT digital multiplex, must inform the other bodies that subsequently operate television channels within that multiplex of the conditions being applied to the technical management of the digital multiplex. To that end, they shall agree with said bodies on the additional conditions that allow the capacity of the multiplex to be shared, on the basis of the principles of objectivity, proportionality and good faith, guaranteeing the quality and continuity of the state-wide and autonomous community-level public television service at all times.

In all cases, for the purpose of achieving more efficient use of the spectrum's resources, bodies that operate television channels within the same multiplex must agree on the technical conditions that allow for the use of the multiplex's capacity to be optimised.

2. Disputes that arise between bodies concerning the technical management of the multiplex, including those that arise in relation to the content of this provision and the third additional provision, will be settled by the National Commission on Markets and Competition by means of a resolution, which among others, may include the obligation to use statistical multiplexing techniques when necessary in order to guarantee optimal use of the multiplex's capacity.

Third additional provision. *Software updates for digital terrestrial television receivers.*

1. The Corporación de Radio y Televisión Española and autonomous community-level public television service providers must, for their coverage area and within the capacity assigned on the digital multiplexes that they are responsible for managing, provide the necessary capacity to update the software in digital terrestrial television receivers.

2. For this purpose the Corporación de Radio y Televisión Española and autonomous community-level public television service providers will enter into the appropriate agreements with the manufacturers of television receivers or other companies governing updates to the software in digital terrestrial television receivers, including the economic charges, which must be proportional to the capacity allocated by said bodies for updating the software. These agreements must be entered into under transparent, objective and non-discriminatory conditions.

Fourth additional provision. *Adaptation of technical plans.*

The State Secretary for the Information Society and the Digital Agenda will, ex officio, adapt the technical plans that have already been approved regarding stations that are going to form part of the digital multiplexes specified in the national technical plan for digital terrestrial television approved by this Royal Decree, using a new radio channel.

The inclusion of a new technical plan for the new planned radio channel will not be necessary, except in the case where different technical characteristics have been agreed internationally.

Fifth additional provision. *Stations with authorisation to commence broadcasting.*

Stations referred to in the fourth additional provision that were already authorised to commence broadcasting shall continue to be deemed authorised.

Sixth additional provision. *Public initiative to extend digital television coverage.*

1. The competent government bodies and government-run organisations will be able to undertake initiatives to broadcast digital television services to citizens in areas where there is no digital terrestrial television service coverage.

2. These initiatives must comply with the following conditions:

a) They must be implemented in accordance with the applicable legislation, in particular not engaging in activities that distort competition and respecting the principle of technological neutrality.

b) They must obtain the approval of the bodies licensed to provide digital television services to broadcast their channels and content. Competent government bodies and government-run organisations may obtain this approval before completion of the tender procedure for expansion of their digital television coverage.

c) c) They must comply, where applicable, with the European Union state aid rules, taking into account, where applicable, the provisions of Commission Regulation (EU) No 1407/2013 of 18 December 2013 on the application of Articles 107 and 108 of the Treaty on the Functioning of the European Union to *de minimis* aid.

d) The electronic communications network that serves as a support for the broadcasting of the digital television service in areas where there is no digital terrestrial television service coverage shall not be reported to the Operator Register, as per Article 7(3) of Law 9/2014 of 9 May 2014, except where said network is provided by third parties, whether for consideration or free of charge, or through which other services available to audiences other than those of the aforementioned digital television service are provided, in which case they must comply with the provisions of Article 9 of General Telecommunications Act 9/2014 of 9 May 2014.

3. When these initiatives are run through terrestrial stations, in addition to complying with the aforementioned conditions, they must comply with the following conditions:

a) They must provide the bodies licensed to provide digital terrestrial television services whose coverage is being extended with the list of stations to which they are assigned to broadcast digital terrestrial television services via the radio public domain.

b) The terrestrial stations will form a single-frequency network that complies with the national technical plan for digital terrestrial television, and will not cause damaging interference with other legally established stations.

c) In cases where the initiative is decided upon by the competent bodies of local government corporations or other local public bodies, the maximum effective radiated power must be no greater than 10 watts.

d) They must submit applications for the station to be allocated a frequency to the State Secretary for the Information Society and the Digital Agenda prior to the submission of the technical plan, when the maximum effective radiated power is greater than 3 watts.

e) For all stations, they must submit the technical plan of the installations in accordance with the following criteria:

1. For stations with a maximum effective radiated power greater than 10 watts, they must submit a technical plan, signed by a qualified telecommunications technician, to the State Secretary for the Information Society and the Digital Agenda for approval.

2. For stations with a maximum effective radiated power of less than or equal to 10 watts, they must submit the technical plan of the installations to the State Secretary for the Information Society and the Digital Agenda and, subsequently a certificate must be submitted attesting that the installation complies with the technical plan, both of which must be signed by a qualified telecommunications technician. In addition, they must submit the installation certificate signed by the telecommunications installation company that performed said installation.

Seventh additional provision. *Radio channels for autonomous community-level digital terrestrial television micro-transposers.*

1. In order to cover radio shadow areas where the use of the allocated radio channel in an autonomous community-level digital multiplex is not viable, Autonomous Communities can seek permission from the State Secretary for the Information Society and the Digital Agenda to use a different radio channel in these radio shadow areas.

2. If the availability of the radio spectrum permits, the State Secretary for the Information Society and the Digital Agenda can identify a radio channel for this purpose and the specific conditions for its use. In all cases, the use of these channels must comply with the following conditions:

a) The coverage must be limited to the radio shadow areas where use of the initially allocated radio channel is not possible.

b) The effective radiated power must not exceed 5 watts.

c) It must not cause harmful interference with other authorised stations and cannot claim protection from interference from other legally established stations.

3. Autonomous Communities must notify the State Secretary for the Information Society and the Digital Agenda of the technical and geographical characteristics of each micro-transposer station that is installed under this provision.

Eighth additional provision. *Authorisation to rule on technical adjustments and adaptations.*

The State Secretary for the Information Society and the Digital Agenda is authorised to rule on technical adjustments or adaptations, including radio channel changes, arising from international coordination for the purpose of achieving greater efficiency in the use of the radio spectrum or for resolving radio compatibility problems, in particular, those that could arise during the launch of broadcast stations, or for facilitating the simultaneous broadcast of television channels with the aim of facilitating adaptations to television receivers where necessary.

Ninth additional provision. *Digital terrestrial television service information parameters.*

The maintenance of the Register of digital terrestrial television service information parameters created by Order ITC/2212/2007 of 12 July 2007 setting out obligations and requirements on digital multiplex managers for digital terrestrial television and creating and governing the register of digital terrestrial television service information parameters, as well as the management and allocation of parameters shall be the responsibility of the State Secretariat for the Information Society and the Digital Agenda, in accordance with the provisions of Section 5 of the seventh additional provision of Law 9/2014 of 9 May 2014.

Tenth additional provision. *Autonomous community-level digital multiplexes.*

The autonomous community-level digital multiplexes that were fully operated by a private company on behalf of the competent bodies of the Autonomous Communities prior to the entry into force of Royal Decree 944/2005 of 29 July 2005, which approved the national technical plan for digital terrestrial television, are not the digital multiplexes provided for in Article 2(4) and will continue to be reserved for the Autonomous Communities.

Eleventh additional provision. *Updates to digital terrestrial television receiver systems for the purpose of releasing the second digital dividend.*

1. The updates necessary to adapt digital terrestrial television signal receivers for the purpose of releasing the second digital dividend will be performed by companies on the Register of Telecommunications Installation Companies, at least, in types A or F of those provided for in Order ITC/1142/2010 of 29 April 2010 implementing the Regulation governing the installation and maintenance of telecommunications equipment and systems, approved by Royal Decree 244/2010 of 5 March 2010. The installations will be adapted according to the technical standards contained in Annex 1 of the Regulation governing common telecommunications infrastructure for access to telecommunications services in the interior of buildings, approved by Royal Decree 346/2011 of 11 March 2011.

2. Prior to the start of the updates that are necessary for the adaptation of the digital terrestrial television receiver installations for the purpose of releasing the second digital dividend, the installation company must provide the property owner or, where applicable, property owners' association with a description of the works to be performed, a list of the new elements that will be incorporated into the installations and those that will need to be replaced or removed, and a quotation for the work.

3. Once the works to adapt the installations for the purpose of releasing the digital dividend are complete, the telecommunications installation company will send the property owner or, where applicable, property owners' association a copy of the installation certificate that complies with the standardised form included in Annex III of Order ITC/1142/2010 of 29 April 2010, appending details of the works performed.

Twelfth additional provision. *Adaptation of the technical plans for common telecommunications infrastructure (ICT) for access to telecommunications services in the interior of buildings.*

1. The technical plans submitted to the Ministry of the Economy and Enterprise after this Royal Decree enters into force must include only the radio channels in the corresponding geographical area that make up the digital multiplexes provided for in the national technical plan for digital terrestrial television approved by this Royal Decree.

2. Site layout drawings issued after entry into force of this Royal Decree that refer to technical plans submitted to the Ministry of the Economy and Enterprise prior to said entry into force, must expressly indicate, in an annex, the need to amend the original technical plan in order to adapt it to the radio channels that form the digital multiplexes provided for in said plan.

3. In any case, the common telecommunications infrastructure that is installed after this Royal Decree enters into force shall comply with the aforementioned Technical DTT Plan.

Thirteenth additional provision. *Information for users of high-definition and ultra-high definition digital terrestrial television services.*

The bodies licensed to provide digital terrestrial television services will only be able to indicate on the screen that a television programme is being broadcast in high definition or ultra-high definition, regardless of the representative symbol or logo used, in particular with the HD or UHD abbreviations, when its broadcast complies with the technical specifications established in the Articles 9 and 10, respectively, without prejudice to the fact that its content may be partially made up of programmes or fragments of content that were not produced with said characteristics.

Fourteenth additional provision. *Use of the 470-694 MHz band for the provision of digital terrestrial television services and protection of the provision of these services.*

1. The 470-694 MHz band will be used for the provision of digital terrestrial television services, until at least 2030.

2. The electronic communications services provided on the 700 MHz frequency band (694 to 790 MHz) must not cause interference with television broadcasting services that operate on the adjacent lower frequency band (470-694 MHz).

To this end, stations broadcasting electronic communications services, which are provided over the 700 MHz frequency band, must adjust their technical characteristics to the conditions established in the annex to Commission Implementing Decision (EU) 2016/687 of 28 April 2016 on the harmonisation of the 694-790 MHz frequency band for terrestrial systems capable of providing wireless broadband electronic communications services and for flexible national use in the Union, as well as to the decisions adopted within the European Union.

In the event that television broadcasting services suffer interference or disturbances, the electronic communications service licence-holder will be obliged to perform the necessary technical corrections to completely eliminate the interference and, where applicable, bear the cost of the modifications to be made to the affected receivers or the cost of any alternative installations that are stipulated in order to ensure the continuity of the television broadcasting service.

The State Secretary for the Information Society and the Digital Agenda will resolve any complaints that are submitted in order to ensure compliance with the provisions of the above paragraph.

Fifteenth additional provision. *Technical transmissions to drive advanced standards of digital terrestrial television.*

1. In order to favour and drive the future introduction of advanced standards of digital terrestrial television with higher spectral efficiency technologies, which allow for more effective use of the radio spectrum and better image and sound quality, the State Secretary for the Information Society and the Digital Agenda will be able to authorise promotional technical broadcasts that make use of these technologies, subject to the availability of frequencies and the limitations arising from international frequency coordination agreements.

2. These technical broadcasts must be performed in accordance with the technical specifications for ultra-high definition digital terrestrial television broadcasts established in Article 10, and the technical broadcast specifications will comply with European telecommunications standard EN 302 755.

3. For the same purpose of favouring and driving the future introduction of advanced standards of digital terrestrial television, digital terrestrial television service licence-holders will be able to transmit events in ultra-high definition on any of their television channels, on the digital multiplexes in which all channels have switched to broadcasting in high-definition, using the capacity that they are allocated. These broadcasts must comply with the technical specifications for ultra-high definition digital terrestrial television broadcasts established in Article 10.

First transitional provision. *Amendments to the licences granted for the provision of digital terrestrial television services.*

Amendments to the licences granted for the provision of digital terrestrial television services that may arise from the application of this Royal Decree will be granted, at any time, by the competent bodies responsible for granting licences. In particular, amendments to the licences granted for the provision of digital terrestrial television services that may arise from changes to digital multiplexes or radio channels that form the different digital multiplexes in accordance with the provisions of this Royal Decree and the plan that it approves will be granted ex officio and in a manner governed by the competent body.

Second transitional provision. *Amendments to the licences granted for the use of the radio public domain.*

The State Secretary for the Information Society and the Digital Agenda will, *ex officio*, make the appropriate amendments arising from the application of this Royal Decree to the licences granted for the use of the radio public domain and will ensure that they are noted in the corresponding registers.

Third transitional provision. *Common provisions for the release of the 694 MHz to 790 MHz frequency band.*

1. Without prejudice to compliance with the general population coverage obligations that are established in the previous articles, state-wide and autonomous community-level digital terrestrial television service providers that, in accordance with the provisions of Articles 4, 5 and 6, will be operating on the RGE1, RGE2, MPE1, MPE2, MPE3, MPE4, MPE5 and MAUT digital multiplexes must achieve coverage on the new radio channels that they will be putting into service on said digital multiplexes that is at least equal to the coverage that was previously achieved in each affected geographical area under the coverage obligations for the replaced radio channels.

Similarly, the insular or local digital terrestrial television service providers that are to put new radio channels into service in accordance with the provisions of the third final provision must achieve a coverage in their allocated area that is at least equal to the coverage that was previously achieved on the replaced radio channels in the authorised service area.

The coverage obligations established in this section must be achieved prior to 1 June 2020.

2. The digital terrestrial television service providers that, in accordance with the provisions of this Royal Decree, operate on the RGE1, RGE2, MPE1, MPE2, MPE3, MPE4, MPE5 and MAUT digital multiplexes will be able to temporarily use the radio channels currently in service that previously

made up the aforementioned digital multiplexes and that are to be replaced, in order to facilitate the process of adapting television signal receivers.

3. Insular or local digital terrestrial television service providers will be able to temporarily continue using the radio channels of the insular and local digital multiplexes that were legally in operation when this Royal Decree entered into force and which must be replaced in accordance with the third final provision, in order to facilitate the process of adapting television signal receivers. In any case, insular or local digital terrestrial television service providers that use radio channels of the insular and local digital multiplexes within the 470-694 MHz band and that must be replaced in accordance with the third final provision shall cease broadcasting on said channel within 4 months after entry into force of this Royal Decree.

4. By resolution of the responsible person at the State Secretariat for the Information Society and the Digital Agenda, the conditions under which and the date on which broadcasts will cease on the radio channels indicated in Sections 2 and 3 will be established for each geographical area stipulated in the national technical plan for digital terrestrial television that is approved by this Royal Decree. In particular, it will be possible to bring forward the date on which the use of said radio channels ceases in those areas in which it is necessary for international cooperation reasons, in the cases in which they were intended to be used for other digital multiplexes in accordance with the national technical plan for digital terrestrial television approved by this Royal Decree, or when the cessation of said broadcasts was necessary in order to allow the launch of other planned radio channels.

When determining the deadlines and conditions indicated in the previous paragraph, the specific circumstances of each geographical area will be taken into account, such as the radio channel changes to be carried out, the affected population, and the characteristics and complexity of the geographical location.

5. Under no circumstances will the cessation of broadcasts on the radio channels in the 694 MHz to 790 MHz frequency band operated by television service providers take place after 30 June 2020 for any digital multiplex or radio channel and for any of the geographical areas or local television coverage areas.

Similarly, the temporary use of all radio channels indicated in Sections 2 and 3 of this provision will in all cases end before 30 June 2020.

Fourth transitional provision. *Time limit on the use standard-definition digital terrestrial television channels.*

Regardless of their coverage area, digital terrestrial television service licence holders that broadcast standard-definition television channels may continue to broadcast in that resolution until 1 January 2023. At any time before this date, said licence holders may upgrade the broadcast of these

channels to high-definition by prior notification of the administrative authority that granted the licences to provide the service and subsequent termination of standard-definition broadcasting.

Fifth transitional provision. *Full and simultaneous standard-definition and high-definition broadcasts in the remaining transmission capacity of the digital multiplex*

As a means of driving technological innovation in television services and introducing high-definition television, in the case of the digital multiplexes on which standard-definition television channels are being broadcast, television service providers will be able to use the remaining transmission capacity of the digital multiplex as per Article 7 to make full and simultaneous broadcasts of their standard-definition digital terrestrial television channels in high-definition until 1 January 2023. These high-definition digital terrestrial television broadcasts will be able to be used for broadcasting television programmes or content that does not fulfil the technical specifications indicated in Article 9 in the case that said programmes or content has not been produced in high definition.

Sixth transitional provision. *Technical adaptation of digital terrestrial television receivers*

1. Besides being ready to tune in to digital terrestrial television broadcasts, all digital terrestrial television receivers that enter the Spanish market more than 9 months after the date of entry into force of this Royal Decree must contain a tuner for high-definition broadcasts, and must meet the technical specifications indicated in Article 9. Moreover, they shall have the capacity to receive broadcasts with signal transmission technology that complies with standard EN 302 755 (DVB-T2).

2. In addition to the above requirements, digital terrestrial television receivers with a viewable diagonal screen size greater than or equal to 101.6 cm (40 inches) that enter the Spanish market more than 9 months after this Royal Decree enters into force shall feature the tuner for ultra-high definition broadcasts, with the technical specifications given in Article 10, and broadband connectivity.

3. For interactive services, digital terrestrial television receivers with a viewable diagonal screen size greater than or equal to 61 centimetres (24 inches) featuring a broadband connection that were placed on the Spanish market more than 9 months after entry into force of this Royal Decree shall be compatible with the European standard (ETSI TS 102 796) v1.4.1 (or later) Hybrid Broadcast Broadband TV – HbbTV, according to specification HbbTV 2.0.1 or later.

Seventh transitional provision. *Transitional application of technical specifications for digital terrestrial television receivers for high-definition broadcasts*

The sole additional provision of Royal Decree 691/2010 of 20 May 2010 governing high-definition digital terrestrial television shall remain in force for 9 months after entry into force of this Royal Decree.

Sole repealing provision. *Repeal of regulations.*

1. Royal Decree 691/2010 of 20 May 2010 regulating high-definition digital terrestrial television is hereby repealed.

2. Royal Decree 805/2014 of 19 September 2014 approving the national technical plan for digital terrestrial television and regulating certain aspects for the release of the second digital dividend is hereby repealed.

3. All provisions of a similar or lesser scope that oppose the provisions of this Royal Decree are hereby repealed.

First final provision. *Attribution of powers.*

This Royal Decree is issued by virtue of the exclusive competence of the State regarding telecommunications as recognised in Article 149(1)(21) of the Spanish Constitution.

Second final provision. *Amendment of the national technical plan for digital terrestrial audio broadcasting, adopted by Royal Decree 1287/1999 of 23 July 1999*

The national technical plan for digital terrestrial audio broadcasting, adopted by Royal Decree 1287/1999 of 23 July 1999, is hereby amended as follows.

One. Article 1 is reworded as follows:

‘Article 1. Frequency bands.

1. Terrestrial digital audio broadcasting services will be operated in the following frequency bands:

a) 195 to 216 MHz (blocks 8A to 10D).

b) 216 to 223 MHz (blocks 11A to 11D).

The spectrum limits for each frequency block are outlined in Annex IV.

2. The frequency blocks in the 195 to 216 MHz block are intended, principally, for establishing provincial or, where applicable, insular single-frequency networks, which will be integrated to form national and autonomous community-level multi-frequency networks. The surplus spectrum capacity is intended for local coverage.

3. The frequency blocks of the 216 to 223 MHz band are intended, principally, for establishing state-wide and autonomous community-level single-frequency networks. The surplus spectrum capacity is intended for local coverage.'

Two. Annex IV now reads:

'ANNEX IV

Channelisation of frequency blocks

Block	Limits of the MHz block
8A	195.168-196.704
8B	196.880-198.416
8C	198.592-200.128
8D	200.304-201.840
9A	202.160-203.696
9B	203.872-205.408
9C	205.584-207.120
9D	207.296-208.832
10A	209.168-210.704
10B	210.880-212.416
10C	212.596-214.128
10D	214.304-215.840
11A	216.160-217.696
11B	217.872-219.408

11C	219.584-221.120
11D	221.296-222.832’

Third final provision. *Amendment of the National Technical Plan for Local Digital Television, adopted by Royal Decree 439/2004 of 12 March 2004*

The National Technical Plan for Local Digital Television, adopted by Royal Decree 439/2004 of 12 March 2004, is hereby amended as regards the radio channels currently planned for insular and local digital terrestrial television services which must be vacated as part of the process of releasing the second digital dividend. The insular and local coverage areas in which a new radio channel is planned will be those listed in Annex III to the Technical DTT Plan.

Fourth final provision. *Amendment to the regulation governing common telecommunications infrastructure for access to telecommunications services in the interior of buildings, approved by Royal Decree 346/2011 of 11 March 2011.*

The regulation governing common telecommunications infrastructure for access to telecommunications services in the interior of buildings, approved by Royal Decree 346/2011 of 11 March 2011, is amended as follows:

One. Articles 10(4) and 12 and Point 5(5)(7) of Annex III of the Regulation governing common telecommunications infrastructure for access to telecommunications services in the interior of buildings, substituting the references to the Provincial Telecommunications Inspection Offices with references to the State Secretary for the Information Society and the Digital Agenda.

Two. The technical specifications included in Annex I of the regulation governing common telecommunications infrastructure for access to telecommunications services in the interior of buildings, which apply to the 470 MHz to 862 MHz frequency band will be understood to refer to the 470 MHz to 694 MHz frequency band from the entry into force of the national technical plan for digital terrestrial television approved by this Royal Decree.

Three. Section 4.1.5 of Annex I of the Regulation will be worded as follows:

‘4.1.5. The common telecommunications infrastructure technical plan will be redrafted in accordance with the frequency bands allocated to the services and with the planned radio channels, each time and for each geographic area, for the transmission of digital terrestrial audio and digital

terrestrial television signals. Other telecommunications signals that are broadcast that correspond to services that, where applicable can share these bands as a result of being allocated to them on a secondary basis, or that are distributed by the coaxial cable of the common telecommunications infrastructure using radio channels that were not planned, cannot claim protection from interference caused by digital terrestrial audio and digital terrestrial television signals.

Similarly, the technical plan must guarantee the necessary protection of digital terrestrial television service signals from electronic communications signals that use the 694 MHz to 862 MHz frequency sub-band so that the signals transmitted within this sub-band in accordance with the applicable technical parameters cannot degrade the quality of the signals distributed via the common telecommunications infrastructure used by the digital terrestrial television service.'

Fifth final provision. *Amendment of the regulation on the use of the radio public domain, approved by Royal Decree 123/2017 of 24 February 2017.*

The first additional provision of the Regulation on the use of the radio public domain, approved by Royal Decree 123/2017 of 24 February 2017, is amended as follows.

'First additional provision. Frequency bands with limits on the number of licences for the use of the radio public domain to be granted.

In accordance with the provisions of Article 37(3), and without prejudice to its amendment by the responsible person at the Ministry of the Economy and Enterprise, following an obligatory report by the National Commission on Markets and Competition, and subject to the agreement of the Government Delegate Commission for Economic Affairs, the list of frequency bands for terrestrial networks for which the number of usage licences is limited, in order to guarantee the effective and efficient use of the radio public domain, is initially as follows:

a) 694 to 790 MHz

b) 790 to 862 MHz.

c) 880 to 915 and 925 to 960 MHz.

d) 1427 to 1517 MHz.

e) 1710 to 1785 and 1805 to 1880 MHz.

f) 1900 to 2025 and 2110 to 2200 MHz.

g) 2500 to 2690 MHz.

h) 3.4 to 3.8 GHz.

i) 24.25 to 27.5 GHz'.

Sixth final provision. *Regulatory implementation and application.*

The responsible person at the Ministry of the Economy and Enterprise and the responsible person at the State Secretariat for Digital Advancement will enact, within the scope of their powers, whatever provisions and measures are necessary for the implementation and application of the provisions of this Royal Decree.

Seventh final provision. *Entry into force.*

This Royal Decree will enter into force on the day after its publication in the Official State Gazette.

To be submitted to the Council of Ministers

Madrid, [date] June 2019

MINISTER FOR THE ECONOMY AND ENTERPRISE

Nadia Calviño Santamaría

NATIONAL TECHNICAL PLAN FOR DIGITAL TERRESTRIAL TELEVISION

Article 1. *Frequency band.*

1. Digital terrestrial television services will be provided on the 470 to 694 MHz frequency band (radio channels 21 to 48), with the 694 to 862 MHz frequency band (radio channels 49 to 69) reserved for the provision of electronic communication services, in line with the harmonised uses established in the European Union.
2. The provisions of the previous section apply without prejudice to the use of the 694-790 MHz frequency band (radio channels 49 to 60) under the conditions and during the timeframes set out in the articles and provisions of the Royal Decree adopting this plan.

Article 2. *Digital multiplexes.*

1. The 470 to 694 MHz frequency band will have the following digital terrestrial television networks:

   a) Seven state coverage digital multiplexes, RGE1, RGE2, MPE1, MPE2, MPE3, MPE4 and MPE5.

      For each of these seven digital multiplexes, a network will be established providing state-wide coverage based on the geographical areas indicated in Annex I.

   b) One digital multiplex (MAUT) with autonomous community-level coverage in each of the autonomous communities

      For this multiplex, a network will be established providing autonomous community-level coverage based on the geographical areas indicated in Annex I.

   c) The insular and local digital multiplexes outlined in the national technical plan for local digital television, without prejudice to the provisions of Annex III.

2. 2. The state-wide and autonomous community-level digital multiplexes referred to in the above Section will be operated in each of the geographical areas mentioned using the radio channels in accordance with the plan included in Annex II.

   In each of these geographical areas a single-frequency network will be established, using as its basis the radio channels that are listed in the Geneva 2006 Plan, integrated into the Agreement of the Regional Radiocommunication Conference (RRC-2006), adopted in Geneva in June 2006, as well as the entries subsequently added to this plan on the basis of the coordination agreements reached by Spain with other countries.

Article 3. *Technical specifications for transmitters.*

The technical specifications for transmitters of digital terrestrial television stations will comply with the 8k format of European Telecommunications Standard EN 300 744.

Article 4. *Technical characteristics of the stations.*

Technical characteristics of the digital terrestrial television stations in each site will be those established by the State Secretary for the Information Society and the Digital Agenda, in the decisions adopting their technical plans.

Article 5. *International coordination.*

The technical characteristics of the digital terrestrial television stations will be subject to the amendments that could arise from the application of the international coordination procedures provided for in the Geneva Agreement of 16 June 2006, as well as in any other international agreements that are binding upon the Kingdom of Spain as a member of the International Telecommunications Union (ITU), the European Union and the European Conference of Postal and Telecommunications Administrations (CEPT).

Notes:

- The geographical areas are those defined in Annex I.
- RGE1, RGE2, MPE1, MPE2, MPE3, MPE4, MPE5: digital multiplexes for state-wide broadcasting. The frequency plan for the RGE1 digital multiplex provides for the possibility of autonomous community-level coverage variations, for which the geographical areas identified in Annex I are understood to correspond to the territorial limits of the Autonomous Communities.

- MAUT: digital multiplex for autonomous community-level broadcasting. The frequency plan for the MAUT digital multiplex provides for the possibility of regional coverage variations in each province, for which the geographical areas identified in Annex I are understood to correspond to the territorial limits of autonomous community-level and provincial coverage.

ANNEX IV

Definitions

1. Radio channel: portion of the radio spectrum that is used to broadcast a television signal from a radio station. This is often also referred to as radio frequency.
2. Single-frequency network: where several radio stations are able to cover a certain territorial area, known as a service area, using the same radio frequency or channel in all stations.
3. Digital multiplex: composite signal for transmitting a radio channel or frequency and which, by using digital technology, is able to incorporate the signals corresponding to various television channels and the signals corresponding to various associated services and electronic communications services.
4. Television channel or digital channel: a set of television programmes organised within a programming schedule that cannot be altered by the public.
5. Geographical area: area of land covered from a radio point of view by the main broadcasting transmitter, the secondary transmitters that pick up the primary signal from said transmitter and the smaller transmitters that do not pick up the primary signal from the main transmitter but have overlapping coverage with it or with one of its secondary transmitters. The geographic areas for the Technical DTT Plan are those given in Annex I.
6. Technical management of the digital multiplex: technical and administrative organisation and coordination of the services and technical means, be it shared between different authorised bodies or managed exclusively by one body, that must be used in order to correctly operate the digital channels that are included within said digital multiplex.
