Notification of Regulatory Barriers

8. The use of excavated materials that are not usable in road construction without treatment can contribute to more environmentally and economically viable construction. Although various binders are introduced into the environment through treatment, when used appropriately, the positive impacts of such use far outweigh any potential adverse impacts. Lime, hydraulic binders and binders with pozzolanic properties are considered as binders in this technical specification. It does not address other binders. The technical specification addresses the installation of binders, quality requirements, measurement and acceptance of works.

9. The technical guideline defines the conditions and method for treating natural soils to improve unsuitable material characteristics.
